

## WHAT IS CLAIMED IS:

1. A printer comprising:
  - a main body having a front, a back, and a top cover;
  - a back delivery unit mounted on the back of the main body, for receiving printed media face-up; and
  - a media turnover guide having a curved surface that guides the printed media face-down onto the top cover of the main body.
2. The printer of claim 1, wherein the media turnover guide has a roof and a back wall, the roof and the back wall joining to form said curved surface.
3. The printer of claim 2, wherein the media turnover guide also has a pair of side walls, an entrance opening adjacent the back wall and side walls, and an exit opening adjacent the roof and side walls.
4. The printer of claim 3, wherein the back wall has a projection extending beyond the entrance opening to guide the printed media into the media turnover guide.
5. The printer of claim 1, wherein the media turnover guide is tiltably attached to the main body, the printed media being guided onto the top cover of the main body when the media turnover guide is tilted to a first position, the printed media being delivered to the back delivery unit when the media turnover guide is tilted to a second position.
6. The printer of claim 1, wherein the media turnover guide is detachably mounted on the main body, the printed media being guided onto the top cover of the main body when the media turnover guide is mounted, the printed media being

delivered to the back delivery unit when the media turnover guide is detached.

7. The printer of claim 1, wherein the top cover slopes downward from the back of the main body to the front of the main body, and the media turnover guide has a stacker that rests at least partly on the top cover, for stacking the pages delivered onto the top cover.

8. The printer of claim 1, wherein the main body includes a withdrawable stacker for stacking the pages delivered onto the top cover.

9. The printer of claim 8, wherein the stacker includes a member that forms a surface substantially flush with the top cover of the main body.

10. The printer of claim 9, wherein said member is erectable when the stacker is withdrawn from the main body, and when erected, forms said surface substantially flush with the top cover of the main body.

11. The printer of claim 9, wherein the stacker is housed adjacent the top cover of the main body.

12. The printer of claim 1, wherein the top cover of the main body has a hump extending longitudinally in a direction in which the printed media are delivered from the media turnover guide.

13. The printer of claim 12, wherein the main body includes a withdrawable stacker, housed adjacent the top cover, for stacking the pages delivered onto the top cover, the stacker having a humped member that forms an extension of the hump

on the top cover of the main body when the stacker is withdrawn.
